Data comparison tools are of great importance to people who track hundreds of files, especially programmers and business people. Beyond Compare is a tool used to make it easier to stay in order. Beyond Compare is a powerful data comparison tool that detects differences and tracks changes in different file types and versions. Beyond Compare by Scooter Software is a great tool for anyone who can handle huge amounts of data. It helps them identify corrupted files, data differences, and unnecessary duplicates. This piece of software is simple to use, too. You drag the files for comparison to the home screen so that they can be analyzed. It will then display two items side by side. With Beyond Compare, you can deal with text files, system and cloud storage folders, music, ZIP files, and more. The results are color-coded to help you spot the differences. You can then delete, copy, or modify the data after the comparison. The sync feature allows you to quickly and automatically reconcile differences found in folders. What's more, 3-way merge allows you to combine different versions into one output. Where can I run this program? Beyond Compare works on Mac OS X, as well as on Windows 8 and above. Is there a better alternative? So, Beyond Compare is excellent, but KDiff3 and WinMerge are great alternatives that provide the same features for free, and Meld is another similar choice. Ultimately, what makes this program perfect is the ease of analysis without the need for technical knowledge. It is versatile and powerful, yet simple. Should I download it? Yes, if these features sound helpful. However, if you are not ready to pay for the full version, you will do just as well with free alternatives. Windows Only: Firefox fans have no doubt already updated to the recently released Firefox 3.5 due to its amazing new features, but if you're more portable, Firefox 3.5 Portable Edition is officially available for download. Windows/Mac/Linux: The final version of Firefox is starting to appear on Mozilla's website,... Read moreThat portable version comes to us from reliable people on PortableApps.com, creators of the previously mentioned Portable Apps Suite and brings all the Firefox 3.5 gadgets to the thumb drive. You can still do a little about: config tweaking to get the extension working with Firefox 3.5, but otherwise the portable version looks like it's ready to go. Windows only: PortableApps.com Suite, a full-featured suite of apps that runs from a USB drive,... Read moreMozilla Firefox, Portable Edition [PortableApps.com] Windows / Mac / Linux: The final version of Firefox begins to appear on mozilla's website, and some readers report notifications about updates. Here are some links and how-tos you should check before downloading this browser. Center add-ons - See if the popular extensions that make up the downloading add-ons is compatible with Firefox 3.5 before downloading. Top 10 Firefox 3.5 Features - Breaking down the Private Browsing Mode, TraceMonkey JavaScript engine, little interface features, and bigger changes to the increasingly popular open-source web browser. Turn off location-aware browsing and card tearing – If these features sound more like invasion of privacy and problems with clenching your mouse, respectively, they are pretty easy to disable. Make your extensions work with (Firefox 3.5) - Originally written for large (larger?) Firefox 3.0 upgrade, but it's a bit about: config tweak should keep these extensions have not yet been upgraded working with 3.5 as well, assuming you don't mind potential bugs. Weave sync tool - Mozilla's experimental sync project only works with Firefox 3.5 - but, wait, it already is! It's worth checking out, especially if you're using Firefox on multiple systems. Firefox 3.5 Review – This is both a video run-through with Firefox 3.5 features and a test of the new non-Flash needed powers of Firefox 3.5 video (non-HTML5-compatible browsers just get a .ogv link to download the video). Tell us about your experience updating Firefox 3.5 or why you're pamphing in the comments. Firefox 3.5 – It's time to upgrade [Mozilla] Adventuresome Firefox users who can't wait to try out the do-not-track feature they can do now by grabbing a nightly browser build. Nightly builds are for testing purposes only, Mozilla warns, and are not as stable as beta versions. Last week, Mozilla released details about a feature it intended to add to the upcoming version of its Firefox browser, release 4.0, which would create a universal opt-out for internet users who don't want to be tracked by online marketers. Today, Sid Stamm announced on his extreme geekboy blog that the first iteration of the feature has been included in the latest nightly browser builds. To enable this feature, open the preferences pane in the software, select the advanced tab, and click the box labeled Tell sites I don't want to be tracked. [Click to enlarge] Once set up do not track, every time the browser connects to the downloadable content, it will send a do not track me signal to the site. The syntax of this command has been slightly changed in this version of the function compared to the previous ones. It's DNT now: 1. Previously it was X-Do-Not-Track. Just because your browser has a do not track feature, it doesn't mean that the website will recognize it. We don't anticipate sites looking for a signal yet, so you probably won't notice a difference when browsing the web, Stamm admitted. This collaboration from both browser developers and web operators required not to track to work is seen by some as a major system flaw. As my colleague Tony Bradley pointed out last week: The problem with waiting from websites that track internet usage and collect information about users' online habits, most of these organisations are already aware that this is ethically questionable, and the FTC is working to combat this practice, but they are still deciding to continue collecting data. Note: When you buy something by clicking the links in our articles, we can earn a small commission. Read our affiliate link policy for more information. Want to see more information about files you've downloaded in Firefox? The Download Panel extension for Firefox contains additional information that you can review when you download different files. Note: This extension does not currently work in the Spanish language version of Firefox. Before downloading the Panel Here is the standard Download Manager Window in Firefox ... not much information to look at any of the downloads is out there? Download Panel in Action Looking at our Download Manager Window again you will see a noticeable difference from before. The best part of the new information is the ability to see the exact URL from which the file is downloaded (wonderful!). Options After you install the extension and restart Firefox, look at the Options window to see if you want to add or remove all categories of information. You can also place them in the order that best suits your personal preferences. Application Download Panel makes a nice addition to download Window Manager to help you provide the information you need about the downloaded files. Links Download download download panel extension (Mozilla Add-ons) This image was lost some time after publication, but you can still see it here. Mac OS X only: Furbism.com has several Firefox builds available for download optimized for different Mac processor architectures. Each build is compiled specifically to take advantage of the specific features of the processor listed to wiggle out the absolute best performance from Firefox on our Macs.You can download builds for Mac G3, G4 7400, G4 7450 and G5 Mac. We wrote about similar optimized builds for G4 and G5 Mac a few months ago, but a few people complained about bugginess. Let us know how these works for you in the comments or on tips on lifehacker.com.The BeatnikPad blog has released G4- and G5 optimized versions of everones' favorite browser. Read moreFirefox Mac Community Builds [furbism.com] As iOS devices store more files, their performance decreases until they become useless. iFreeUp is a program that reverses this process by clearing unnecessary data.iFreeUp storage space removes unnecessary files with a single click, improving the performance of your iPhone. This increases your phone's health and makes the overall experience more comfortable. This system improvement tool frees up space on your device by shredding cookies, caches and logs. In this way, smartphones act faster and prevent privacy leaks. The tool is safe to install and use, displaying without adware, adware, or spyware. When launched, the elegant black interface will welcome you in the program. You can access features from two main tabs called Quick Clean and File Manager.Quick clean offers five sections that deal with different parts of memory and storage. You can remove junk, shred photos, perform snooping and anti-theft privacy scans, and optimize performance. You import, export, and delete stored data from the File Manager tab. Displays your phone's content in the categories you view and support as needed. After scanning the memory, the application will display the problems found on the right. All you have to do next is click the big Clean button to deal with the problems. When it comes to transfers and backups, in addition to the usual, you can save progress in applications and games. It's as easy as exporting an app and importing it to another device. Where can I run this program? This app works on Windows 10, Mac OS X 10.7, and iOS 10, and earlier versions of all operating systems. Is there a better alternative? Yes, because iFreeUp can be too expensive. iCareFone is similar even more affordable, and PhoneClean works smoother. If you only need to transfer files, MobiMover has covered.iFreeUp is a useful app to keep your phone running smoothly. It is a pity that this makes people pay for full access. Should I download it? Yes, if you can buy the Pro version for full capacity. Otherwise, there are cheaper tools to manage your device. Device.
